You may have not noticed a change. Although our products are still the same, our style numbers and eCodes are different. To help you find the end mill you are currently using, an EDP number conversion chart can be found on page 60.

SOLID CARBIDE END MILLS

INTRODUCTION

Dormer Pramet's new range of Solid Carbide End Mills represent a new direction in our branding of end mill products all under the Dormer brand name. These solid carbide end mills are suited for the most common milling operations such as slotting, plunge, side and face milling, as well as ramping and copy milling in a wide range of materials.

FEATURES AND BENEFITS

- Consistent performance and repeatability in multiple material applications across a diverse array of machines and conditions.
- This solid carbide end mill family offers ranges of uncoated and coated end mills with options for square end, ball nosed, and radius corners as well as various length options.
- The designs of these products enable them to deliver high quality and performance at an exceptional value. Some styles are specifically designed as material or application specific products. See AMG tables for running parameters in the different materials.

TOOL MATERIAL

Premium micrograin carbide provides an excellent combination of hardness and toughness, resulting in high wear resistance and long consistent tool life.

COATINGS

- A Zirconium Nitride (ZrN) coating on some products offers improved performance in milling aluminum (including high silica aluminum).
- Multi-layer Aluminum Titanium Nitride (AlTiN) coating on some products offers improved cutting edge stability, outstanding wear protection, higher hot hardness and increased tool life.

SHANKS

High precision (h6) shanks are offered as standard on most cutters. Cylindrical shanks are made to DIN 6535 HA but on some of the variable helix designs a Weldon shank design is used. These are made to DIN 6535 HB.

GEOMETRY

- New 2-flute aluminum cutters introduced offer excellent performance in aluminum, aluminum alloys and other non-ferrous materials. This geometry when coupled with the ZrN coating promotes excellent chip evacuation, improves material removal rates and improves surface finishes.
- New variable helix design cutters introduced with radius corners offer increased stability and lower harmonics during the milling process. This reduces the possibility of vibrations and lowers the risk of chipping at the cutting edges or corners. Increased stability also allows these cutters to be used in a wide variety of materials and applications where conventional type cutters do not perform as well.

HSS, HSS-E & HSS-E-PM END MILLS

INTRODUCTION

Dormer Pramet's new range of High Speed Steel End Mills represent a new direction in our branding of end mill products all under the Dormer name. These end mills are suited for most general milling operations such as slotting, plunging, side and face milling, as well as ramping and copy milling depending on the style selected.

FEATURES AND BENEFITS

- Consistent performance and repeatability in multiple material applications across a diverse array of machines and adverse conditions.
- The designs of these products enable them to deliver good quality and performance at an exceptional value.

- This HSS end mill family offers ranges and length options of mostly uncoated end mills with options for square end and ball nosed end, as well as scalloped fine & roughing profile cutters.

TOOL MATERIAL

Manufactured from premium grades of HSS, HSS-E and HSS-E-PM materials.

- HSS tools will flex slightly under pressure and absorb more shock which can be advantageous when rigidity or tool holding is not optimal and vibrations are present.
- HSS-E (HSCo) tool substrate is harder and more wear resistant but will not withstand the shock and vibrations that HSS substrates will absorb which can cause chipping or tool breakage if conditions are not stable.
- HSS-E-PM tools are produced with powder metallurgy technology. These substrates have a finer grain structure resulting in a material with superior edge strength and toughness but similar to HSCo a rigid set-up and good tool holding is important to avoid excess shock and vibrations that can cause cutting edges to chip or fracture.

SHANKS

All cutters in this range are offered with standard Weldon shanks. Weldon type holders are typically used for most HSS cutters but higher quality tool holding with HSS-E or HSS-E-PM cutters can provide better results.

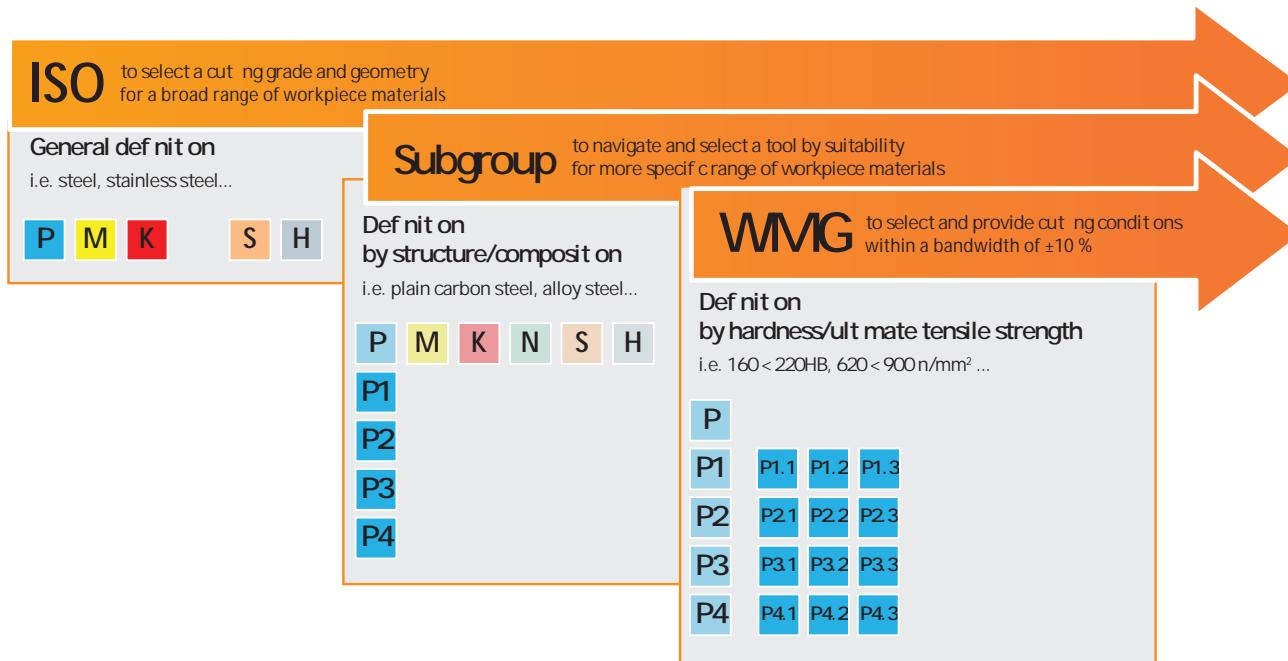

GEOMETRY

- 2-flute, 3-flute, 4-flute and multi-flute end mills are offered in various tool substrates.
- Most end mills in this range have a 30° helix angle for general purpose milling in a wide variety of materials.
- Some styles have a higher 38° Helix to facilitate chip flow when milling aluminum and other non-ferrous materials.
- Various lengths are available to offer longer than standard cut-lengths for milling deeper pockets.
- P9 slotting tolerance end mills are offered in 2-flute and 3-flute options. HSS-E scalloped roughing cutters are available in coarse and fine profile styles to allow for maximum metal removal in a single pass.

COATINGS

- Most HSS, HSS-E & HSS-E-PM end mills in this range are offered as uncoated products.
- Some of our scalloped roughing coarse and fine profile cutters are also offered as coated products.
- The Titanium Carbon Nitride (TiCN) coating on these products will lower the coefficient of friction and improve wear resistance which allows for better chip flow and longer tool life.

WORKPIECE MATERIAL GROUPS (WMG)

ABOUT DORMER PRAMET'S WORKPIECE MATERIAL CLASSIFICATION

Workpiece material groups ("WMG") are used to support easy and reliable selection of the right cutting tool and starting values for machining conditions in particular applications.

Dormer Pramet classifies workpiece materials into six different colored groups:

- Blue: Steel and cast steel (P-group)
- Yellow: Stainless steel (M-group)
- Red: Cast iron (K-group)
- Green: Non-ferrous metals (N-group)
- Orange: High-temperature alloys (S-group)
- Grey: Hardened materials (H-group)

Each of these are divided into subgroups based on their structure and/or composition. For example, P-group steel and cast steel is split into four subgroups, namely:

- P1 – Free machining steel
- P2 – Plain carbon steel
- P3 – Alloy steel
- P4 – Tool steel

A final division includes material properties, such as hardness and ultimate tensile strength. This is to provide our customers with a complete tool recommendation, including starting values for cutting speed and feed.

The table on the next page includes a description of each workpiece material group, as well as examples of commonly used designations.

HOW TO USE THE WMG CHART

To find speeds and feeds

- Select the product you want in our catalog or brochure
- Find the appropriate ISO work material group (WMG) at the top of the page

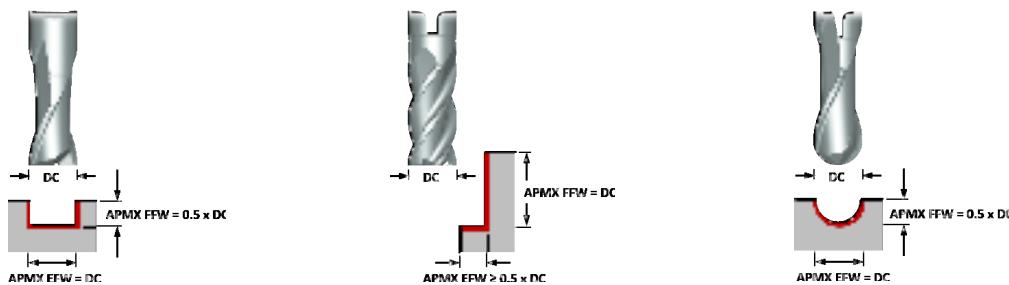

This will let you know if the tool is suitable for your operation and provides the speed (SFM) and alpha character for feed rate (IPR).

- Use the corresponding alpha character to find your cutting feed rate (IPR) in the chart provided in the WMG section of the catalog or brochure (usually near the front of the publication)

Suitability icon → P1.2 WMG code
IPR alpha code SFM 486W

ALTiN coating increases hardness, and improves tool life allowing higher metal removal rates. These unequal helix cutters with corner radii are designed for higher speeds and deeper cuts. Provides superior workpiece finishes by eliminating vibrations and harmonics. Excellent for milling tough alloys and hardened steels.

S223HB has a Weldon shank.

ALTiN coating increases hardness, and improves tool life allowing higher metal removal rates. These unequal helix cutters with corner radii are designed for higher speeds and deeper cuts. Provides superior workpiece finishes by eliminating vibrations and harmonics. Excellent for milling tough alloys and hardened steels.

S248HB has Weldon Shank

SIMPLY RELIABLE

As a professional you can judge the quality of work by just looking at the chip. Our chip is a clean and uncomplicated shape that in itself tells a story. It is a clear and consistent signal and that's why we use it as a symbol for being **Simply Reliable**.
